

NEW Secondary Rope Lanyards

Jelco offers three new options for secondary rope lanyards. We still use the same great 16 strand rope, but updated the product options. We upgraded the 24" plastic tube for an 18" fabric tube made of ballistic material. This solves the problem of the plastic tube cracking over time and becoming a hindrance when passing obstacles. The ballistic material increases the longevity. The rope slides easily through the fabric tube to allow ease of movement while working out of the rope lanyard. We also enhanced the connector offerings. Our standard offering is now an aluminum snap hook, an aluminum carabiner and an aluminum swivel carabiner. All three new options weigh under 2 pounds! Standard offering is 8' but please inquire about additional lengths.

Adjustable Rope Lanyard with Aluminum Snap Hook

- Features a fixed aluminum double-locking snap hook.
- The adjustor features a removable aluminum double-locking carabiner.
- Weight: 1.93 lbs.
- Part number 13242.
